PROFESSIONAL SUMMARY:

Cybersecurity professional specializing in application security, VAPT, and DevSecOps practices. Experienced in identifying, analysing, and mitigating application security vulnerabilities using industry-standard security tools, with a strong foundation in secure SDLC and cloud-native security.

TECHNICAL SKILLS:

VAPT Tools	OWASP ZAP, Burp Suite, Nessus, Nikto, Nmap, Trivy
Static/Dynamic Code Analysis	SonarQube
Security Monitoring Tools	OSSEC, Splunk, Grafana
Container Security	Docker, Kubernetes, GKE
CI/CD Security Integration	Git, Jenkins, Grafana, Prometheus, bash
Protocols and Network Security	TCP/IP, HTTP, HTTPS, SSL/TLS, IPsec
Cloud Platform	AWS, GCP

WORK EXPERIENCE:

TeleGlobal Communications Private Limited, Pune.

Sept 2023 - Present

Designation: Application Security Engineer / Network Engineer

Role: Application Security

- Conducted web application penetration testing using Burp Suite and OWASP ZAP to uncover major OWASP vulnerabilities like XSS, XML, IDOR and SQL injections.
- Integrated SonarQube and OWASP Dependency Check within Jenkins pipelines for automated code and dependency scans.
- Executed VAPT on network devices—including switches, routers, and Mikrotik systems, identifying configuration and authentication weaknesses through controlled brute-force testing to enhance overall network security
- Conducted OS hardening on client servers following CIS benchmarks and implemented network-level security protocols.
- Contributed to developing remediation and mitigation measures to reduce security risks and strengthen application defence.

PROJECTS:

Project 01: Web Application VAPT – DVWA

Tools: DVWA, Burp suit, ZAP, OSSEC, Ubuntu

- Performed full-scope VAPT on DVWA targeting OWASP Top 10 vulnerabilities (Injection, XSS, Broken Authentication, Security Misconfigurations).
- Simulated real-world attacks and integrated OSSEC for intrusion detection, alerting, and log analysis.
- Performed end-to-end penetration testing on DVWA.
- Prepared detailed **VAPT reports** including risk severity, exploitation steps, and remediation recommendations.

Project 02: DevSecOps Pipeline Security – Netflix Clone

Tools: AWS, Git, Jenkins, SonarQube, Docker, Grafana, OWASP Dependency Check, Trivy, Kubernetes

Published Article: [Netflix Clone Secure CI/CD Pipeline](#)

- Designed a **secure CI/CD pipeline** using Jenkins with integrated security scanning tools.
- Implemented SonarQube (SAST) and Trivy (container scanning) to detect code and image vulnerabilities.
- Deployed secure builds on AWS and Kubernetes with real-time monitoring via Grafana.
- Implemented email alerting for build and vulnerability reports, improving incident response visibility.

CERTIFICATIONS:

- Offensive Security and Ethical Hacking (Blackhat)
- CompTIA Ethical Hacking
- Certified Ethical Hacker (CEH-Master) (Pursuing)
- Try hack me, Hack the Box, bug crowd Security Challenge Participant

EDUCATION:

- PG Diploma in **IT Infrastructure and Systems and Security (DITISS)** from **CDAC, Pune** Completed in: March 2023
- B.E From **MGM Jawaharlal Nehru Engineering College**, Aurangabad.

I hereby declare that all the information provided above is accurate and best of my knowledge.
